

Migrate Development Site: simiandtemi.webcase.me to new cyberpanel server

First visit to admin pags of wordpress :

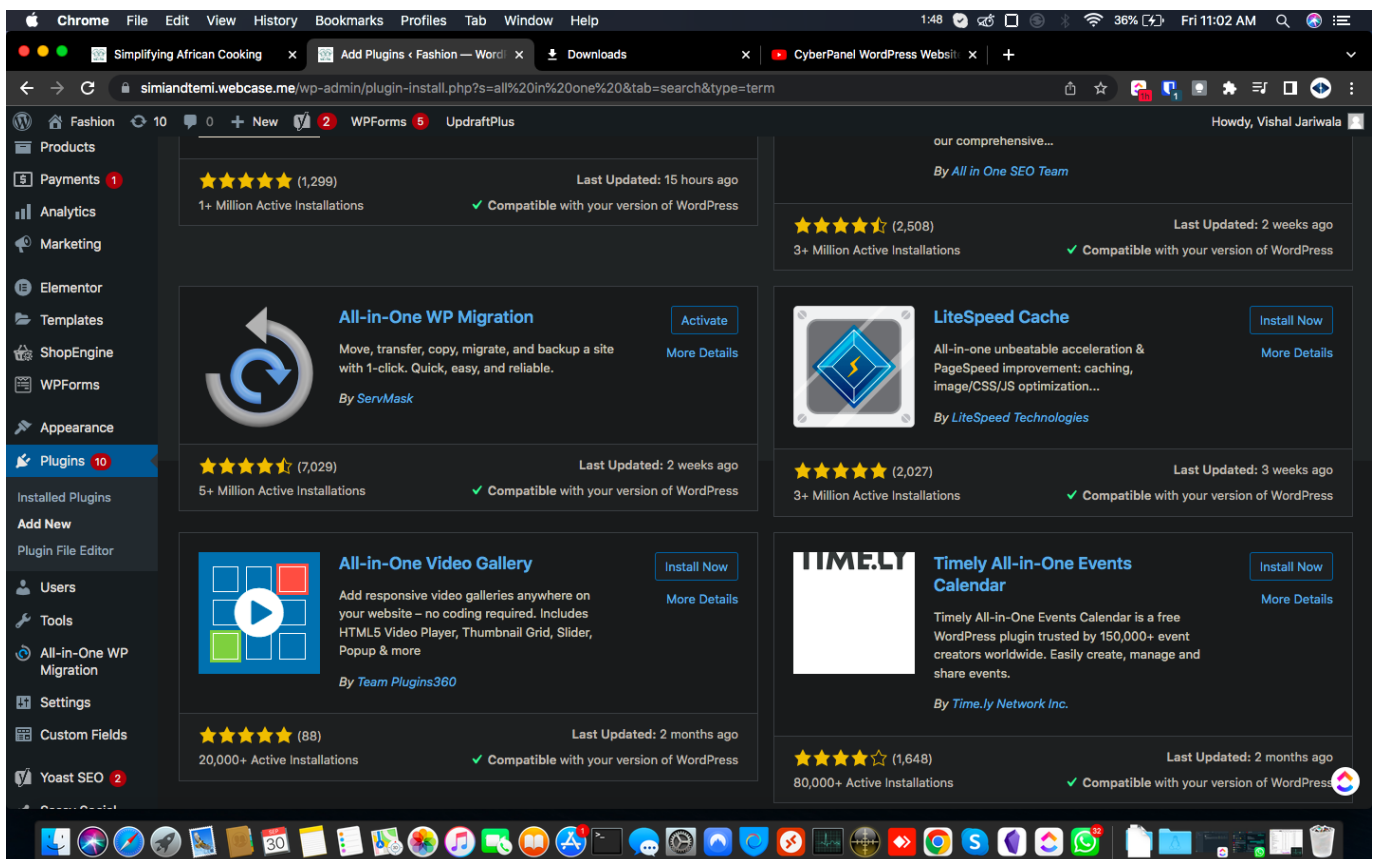

- Enter username and password
- Eg (<https://simiandtemi.webcase.me/wp-admin/users.php>)

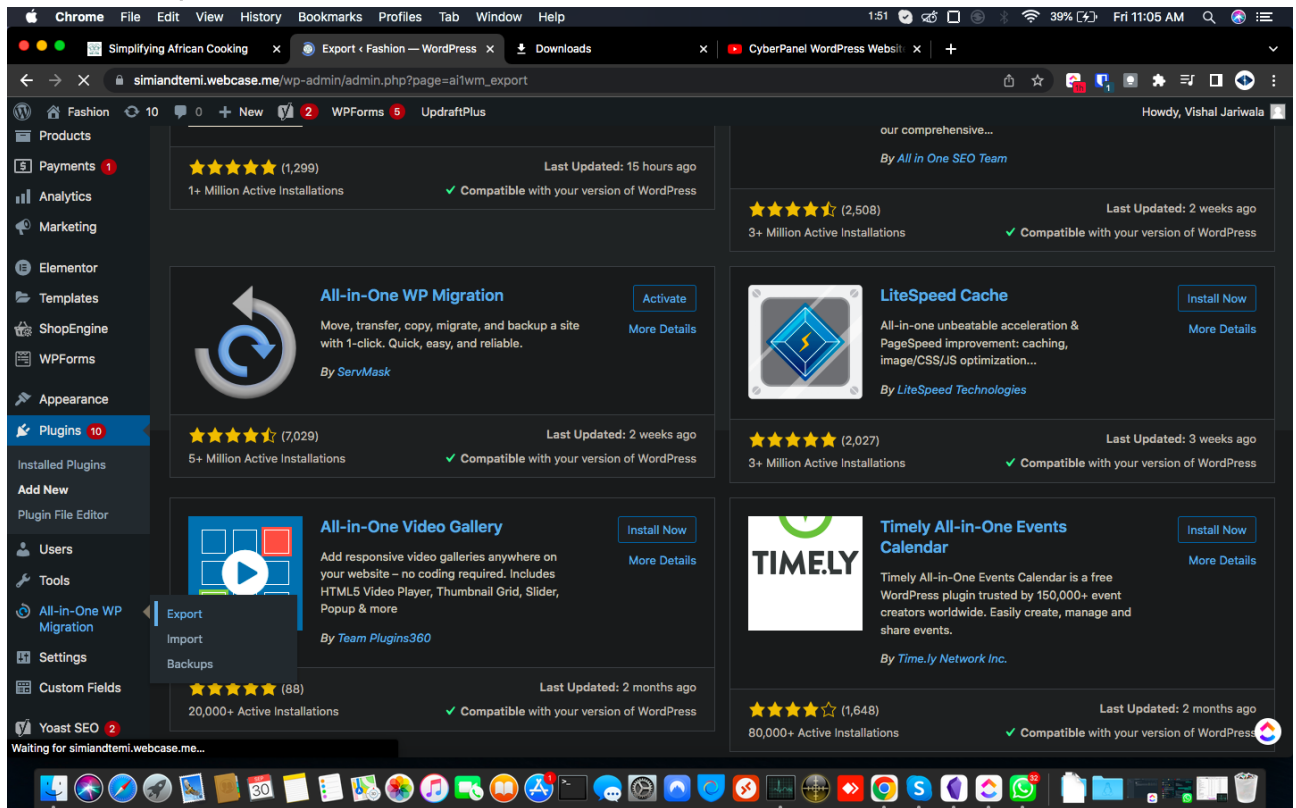

- and on left side. we see a menu bar with all the option we want in worpress.
now find plugins options and move your curser into plugings option.

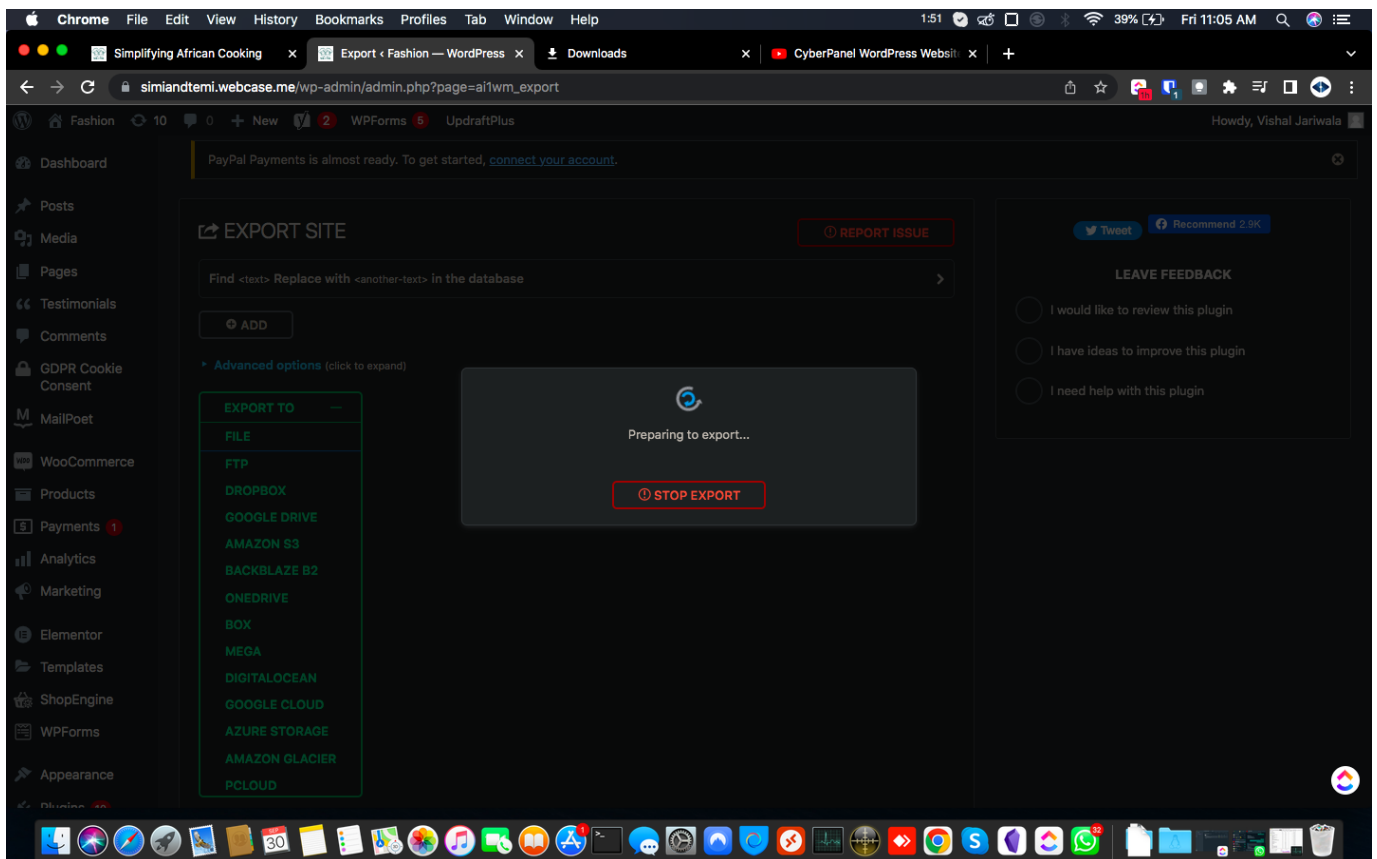

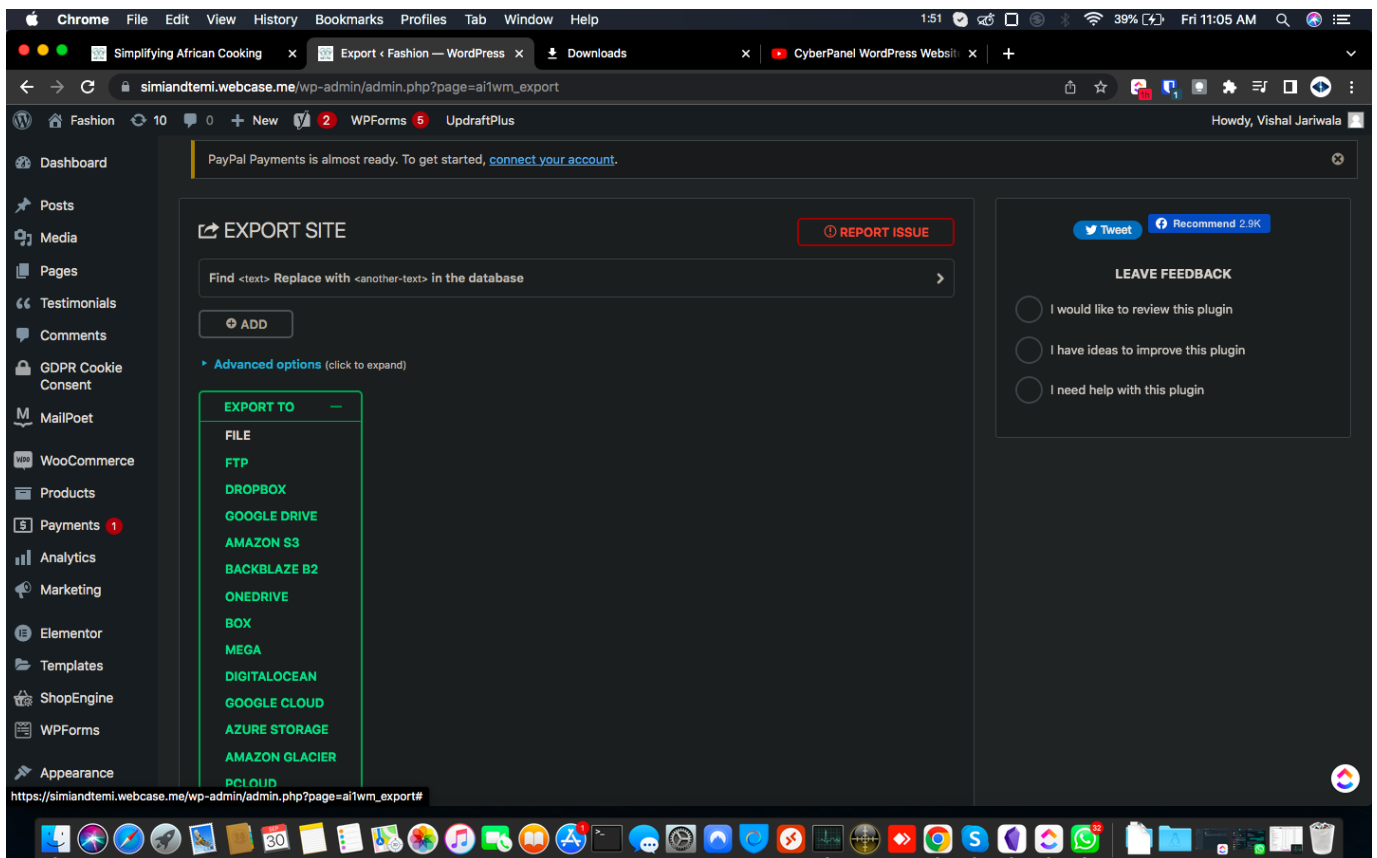

- open plugins option. you will see all the plugin. available for wordpress
- now search for all in one wordpress migration and install it

- now on left side of menu bar we see a new option name (all in one wp migration). like this we can download plugin
- click all in one wp migration and you see export import and backup option over here to back up your site
- click on export

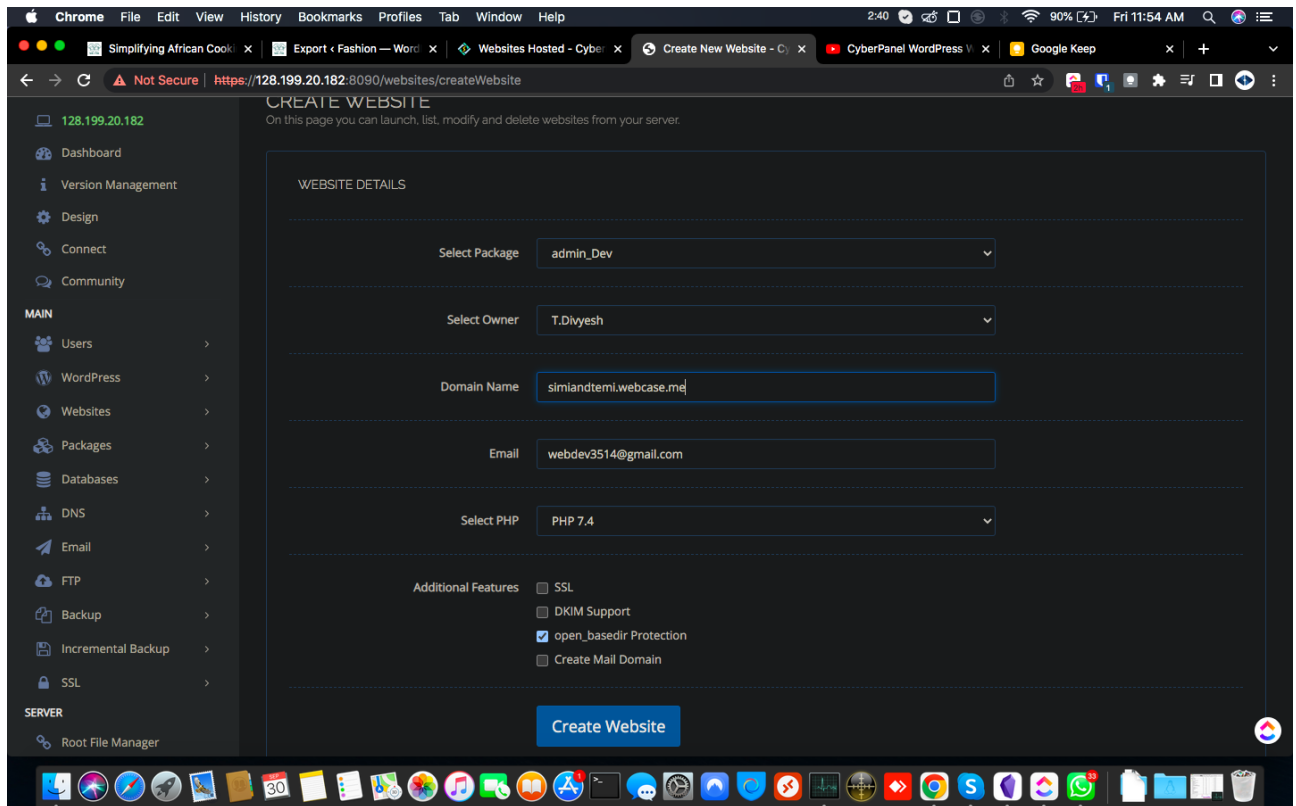

and you can download back up.

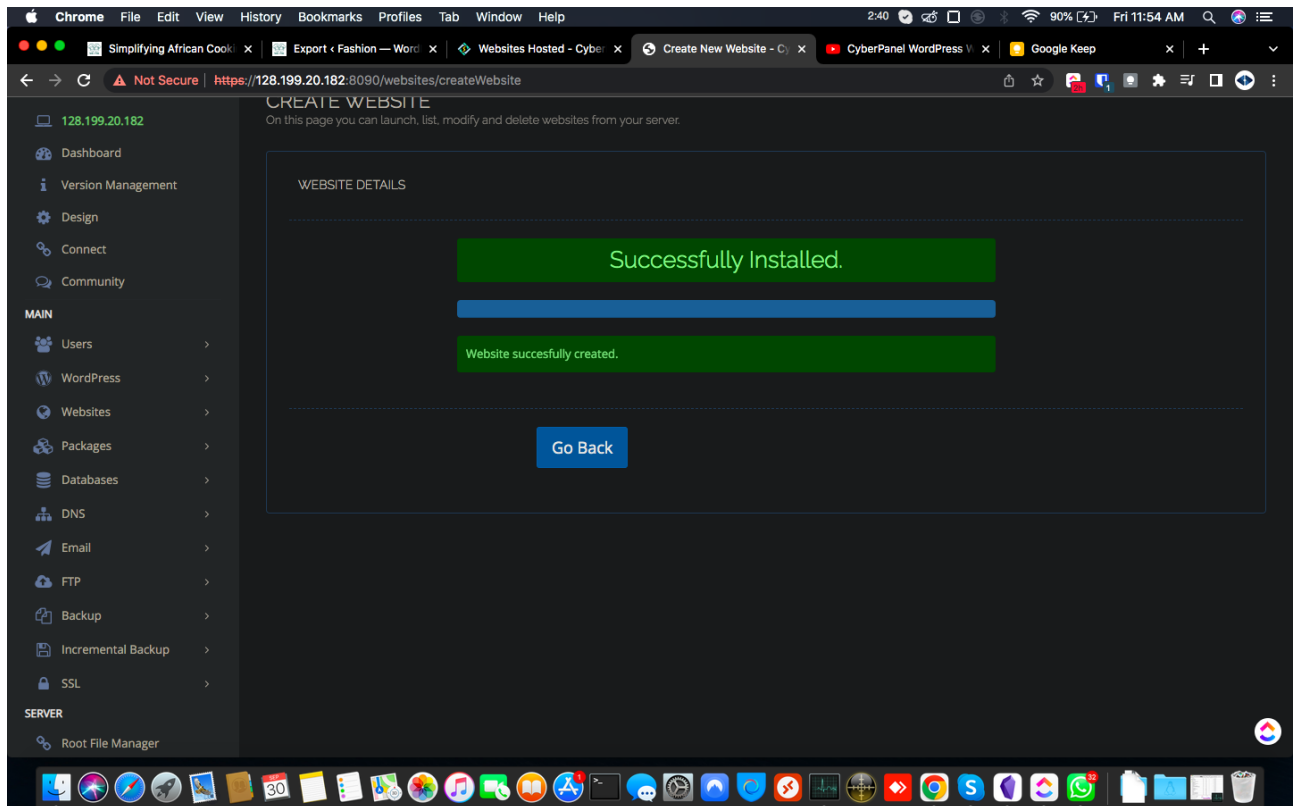

- some time .so it may fail bcoz for large size. so simly that means the back is already present.

Now create a new Site where you want to migrate

- So create a new site website secition in menu bar of cyber panel. --> and click create new webite
- Fill all the details and tick mark on open basedir protection

now new has bin created and

- so now add this IP and DNS in your computer host file in /etc/hosts file
- and then open this dns in any browser
- you will see a cyberpanel is installed page

now come back to cyber panel and visit to the website section -> and open list website

Chrome | File | Edit | View | History | Bookmarks | Profiles | Tab | Window | Help | 3:49 | 89% | Fri 1:02 PM

ptoffice.webcase.me -- File Manager				Manage
Active	128.199.20.182	Issue SSL		
1413MB	Default	vish		

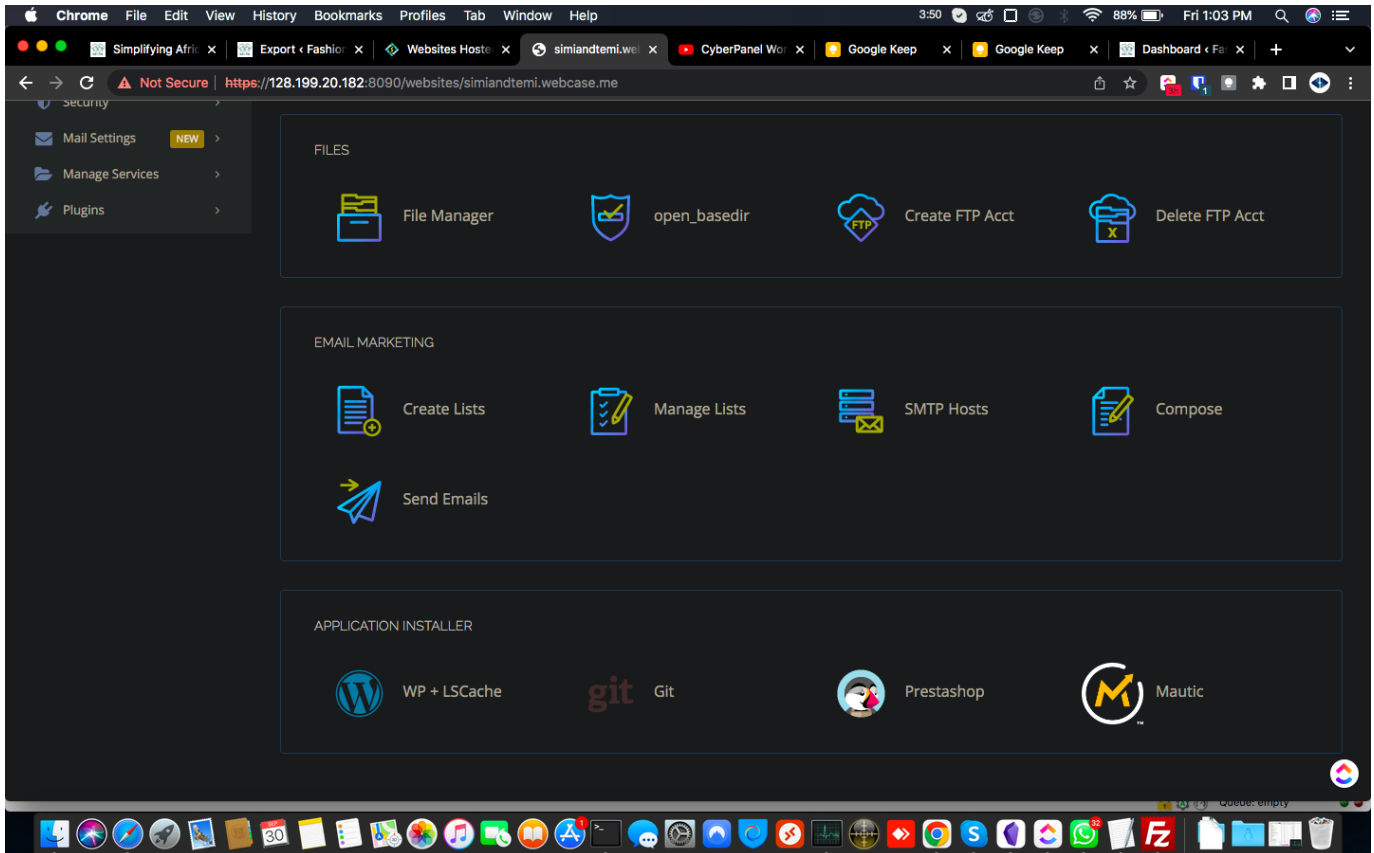

sartobeds.webcase.me -- File Manager				Manage
Active	128.199.20.182	Issue SSL		
1452MB	Default	admin		

simiandtemi.webcase.me -- File Manager				Manage
Active	128.199.20.182	Issue SSL		
0MB	admin_Dev	T.Divyesh		

sportdatastriker.webcase.me -- File Manager				Manage
Active	128.199.20.182	Issue SSL		
186MB	Default	admin		

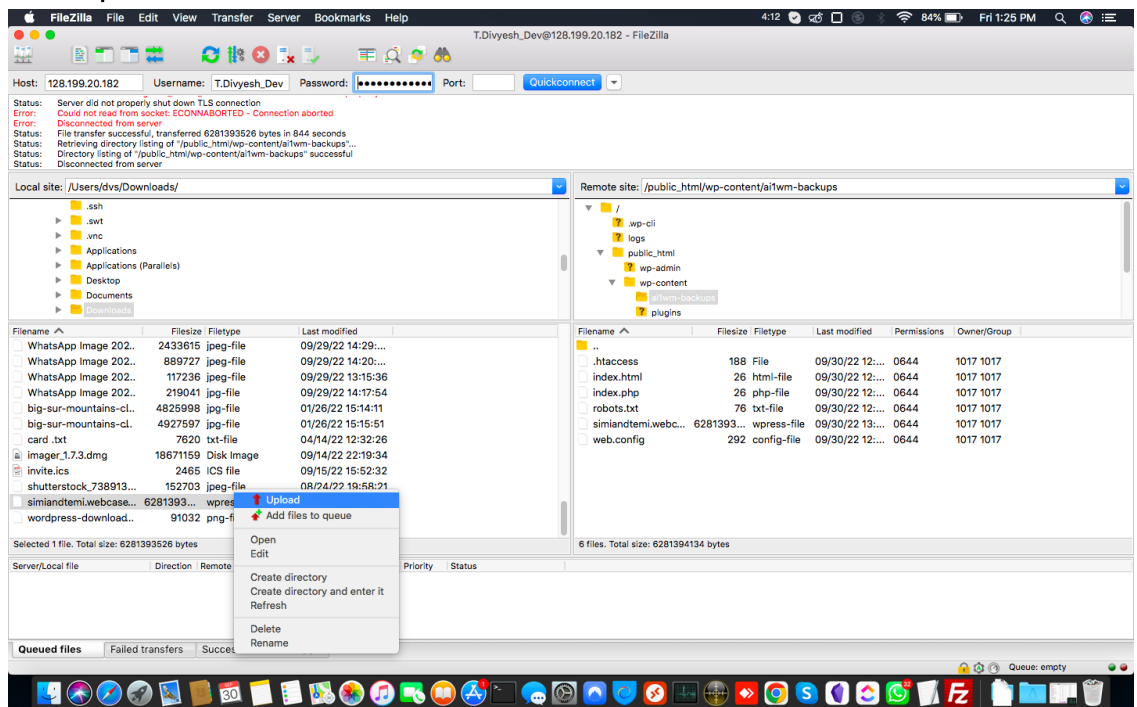

- now on the right side. you will a manage open. click on it
- and scroll down to the botton we will see a wordpress option just install it.

- now open new tab and typer the dns and last type /wp-admin
- so the wordpress page will open
 - so first thing to do is to install all in one wordpress plugin by visiting to plugin page.
 - now create FTP to upload a worpress file
 - so visit to cyber panel and create a FTP account
 - upload it by using filezilla just add all the credentials which we have add at a time of creating FTP

- select that file and upload in a wp-cli--> public_html--> wp-content--> ai1wm-backups
- and upload that file here.

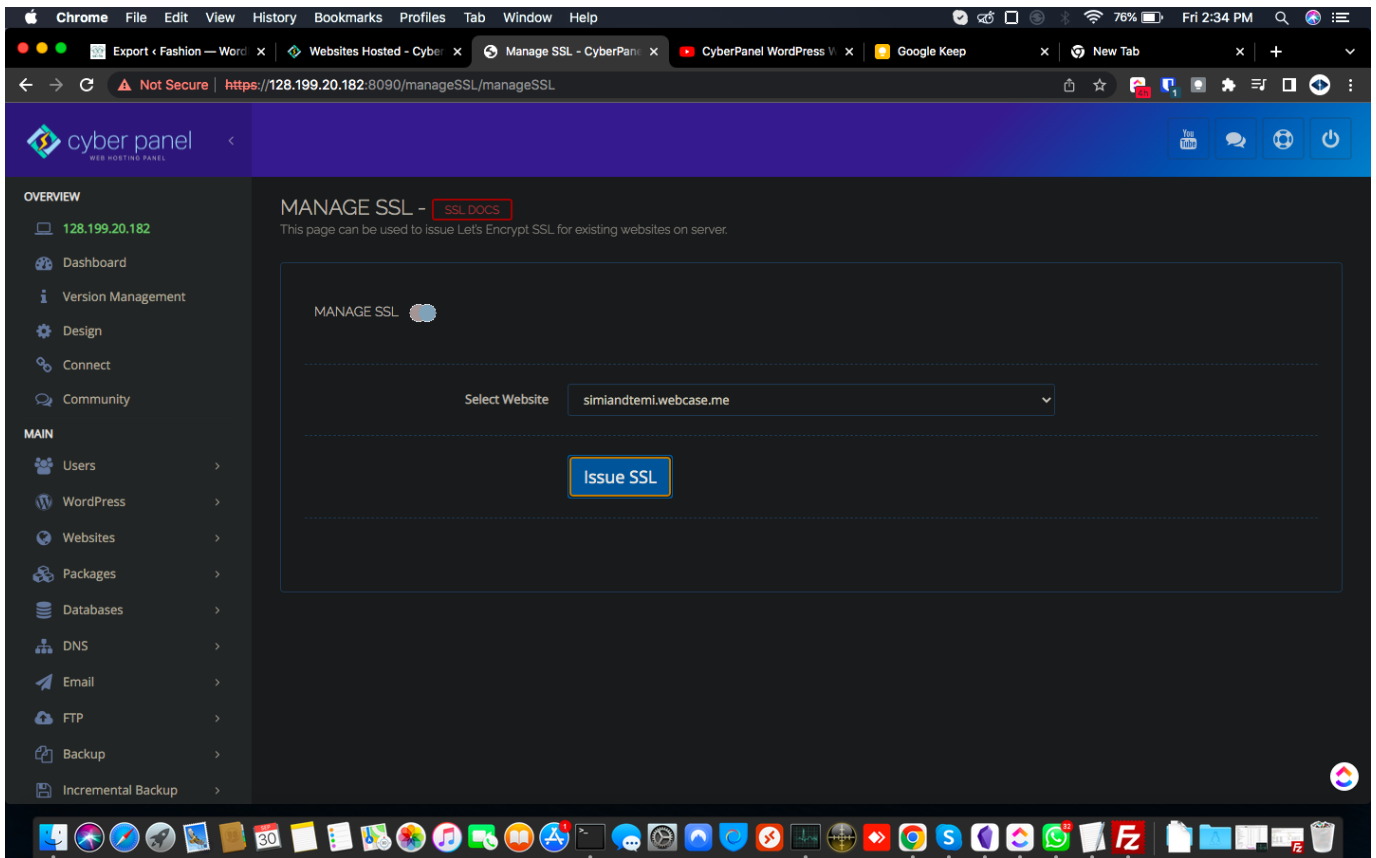

- ones the upload is we can see the name of that file

- ![[Screen Shot 2022-09-30 at 1.23.52 PM.png]]

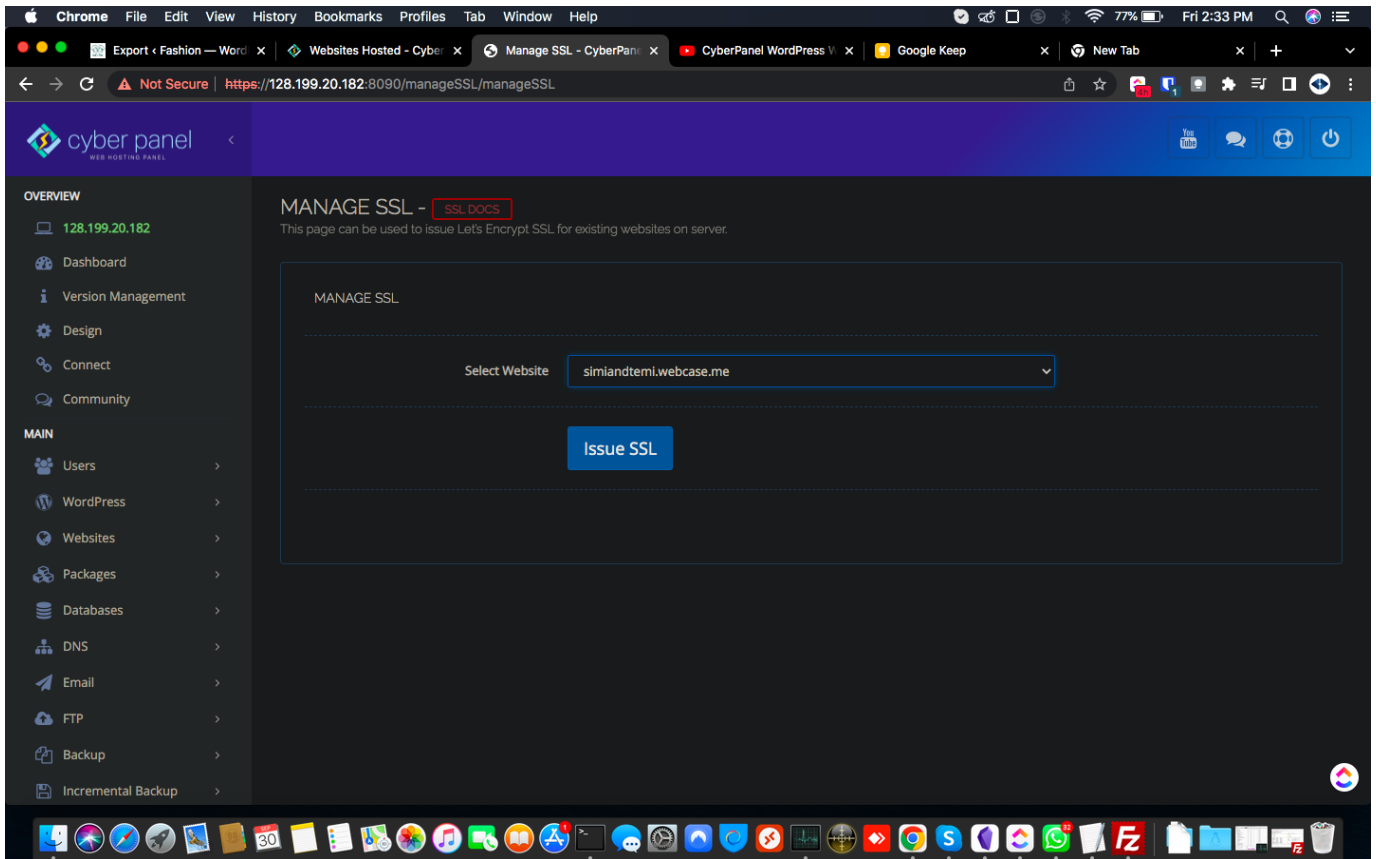

- go to the wp admin page. simiandtemi.webcase.me/wp-admin
- and go to all in one wp migration --> and then in Back up --> and restore

now go to Cyber panel and install SSL

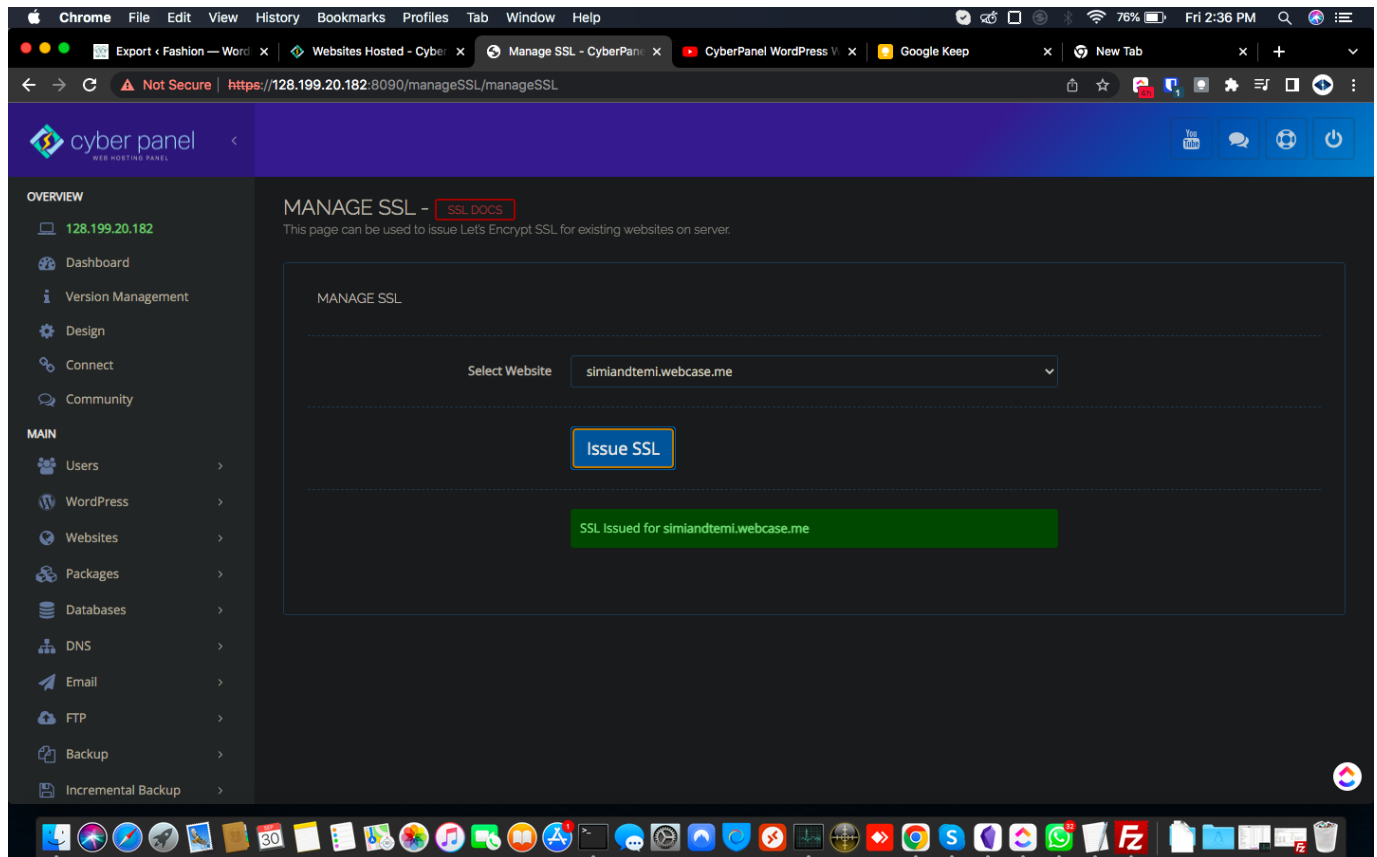

- Go SSL section and click on manage SSL

Select the Site to which you want to assign SSL

and click on Issue SSL

- now go to wp-admin page and setting -> general -> site-url= https://simiandtimi.webcase.me
- and do same for home url
- then again settings --> Paralinks scroll down and save
- done

now log out to admin page
