# HOW To Assign FTP Access OF ANY SITE

## First Log in to cyber panel with the users credentials

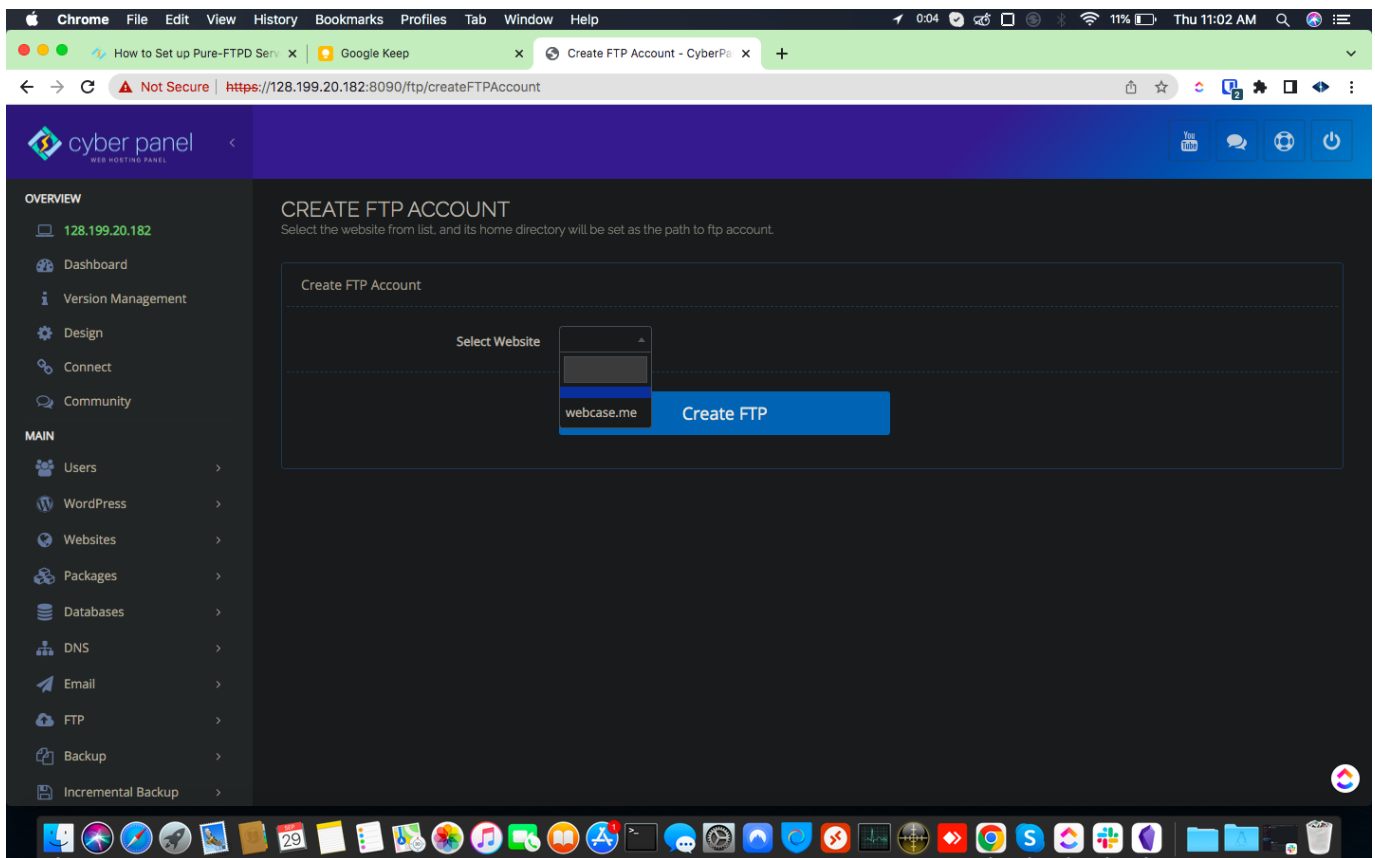

The DashBoard Look like this

No Go into the FTP Section and click on it and we will see and create FTP account
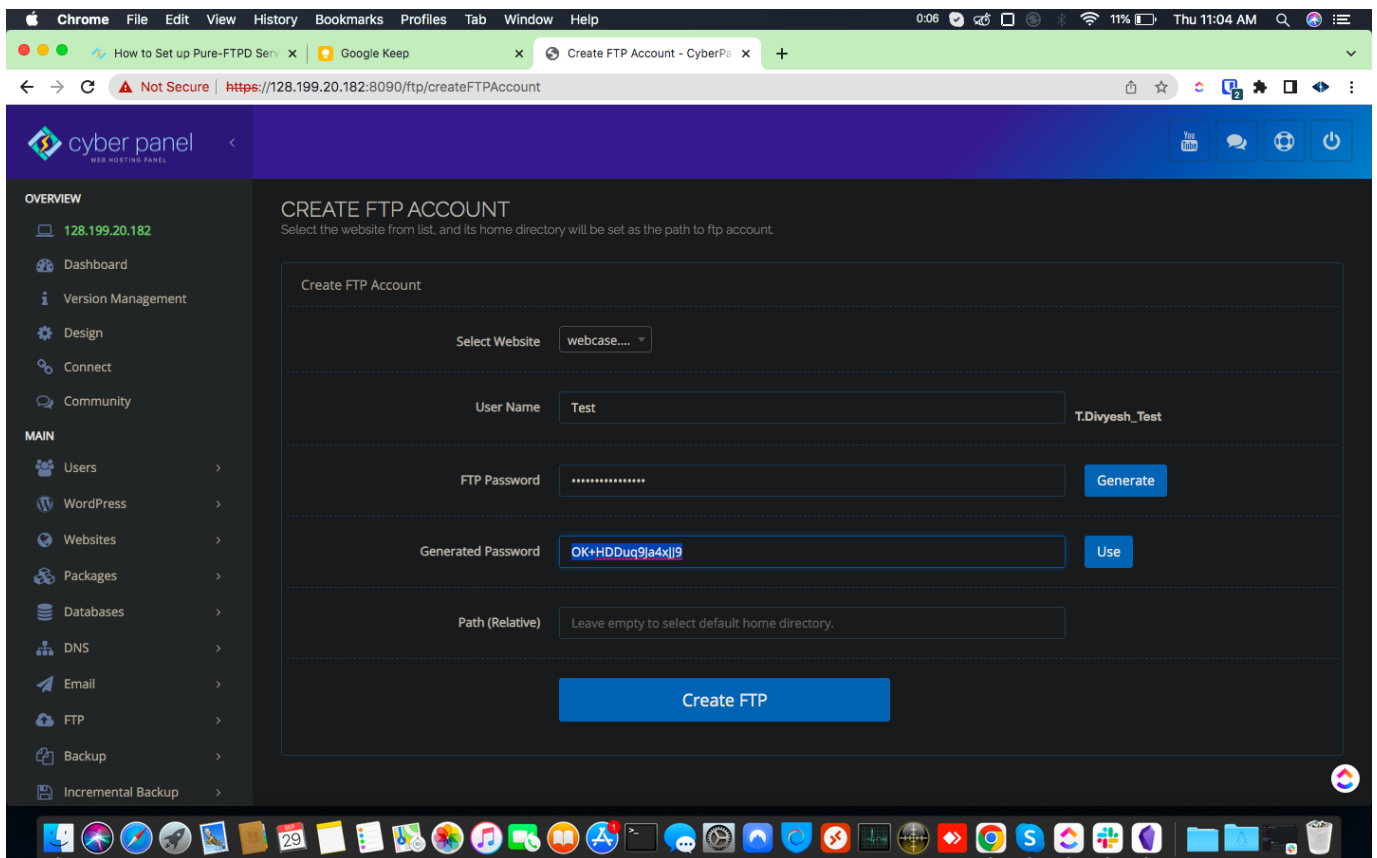

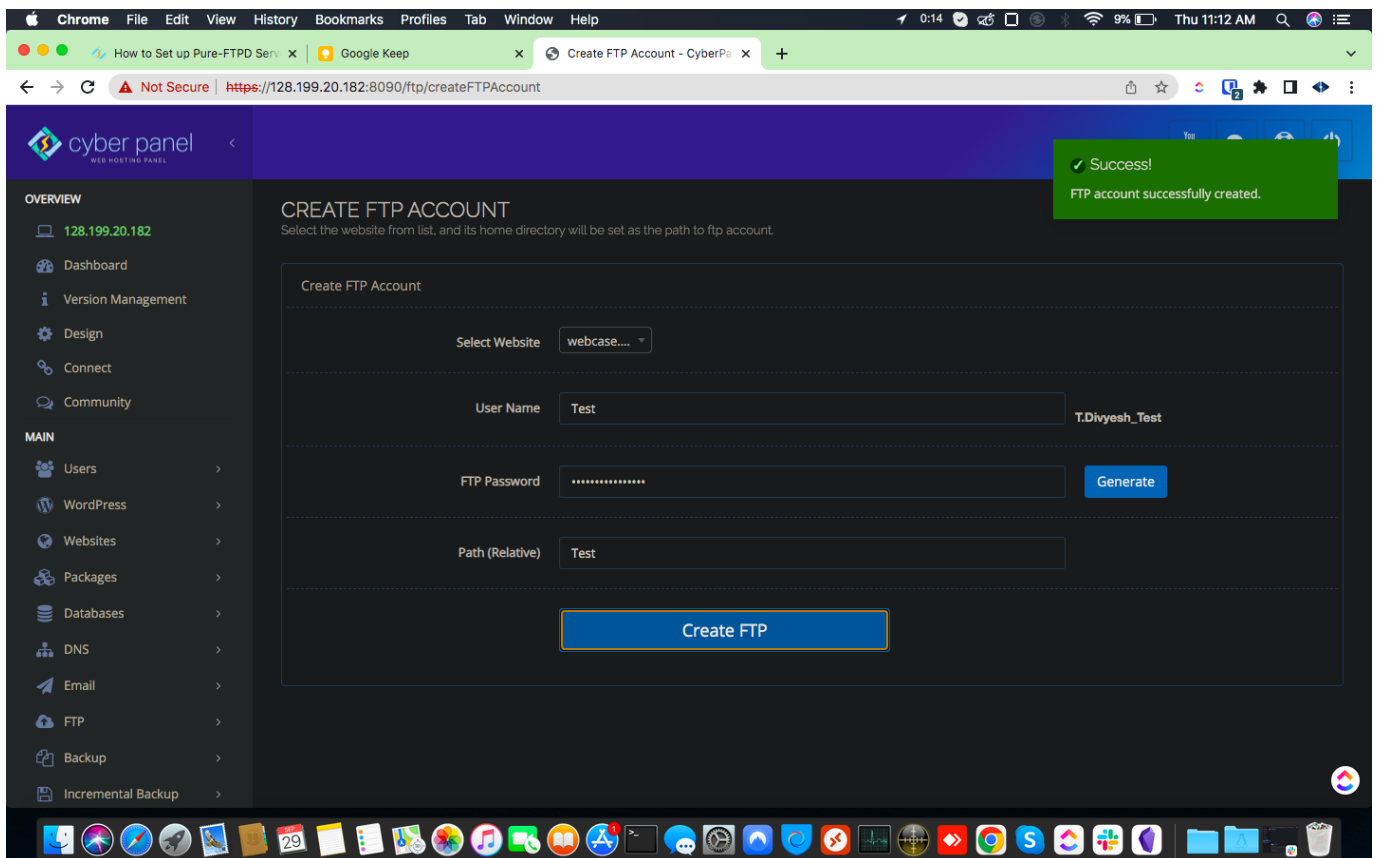

# Click on FTP

and you will see the webcase.me select it and click on Create FTP Button. imp(webacase.me will only come in scroll bar if this Domin will be assign to you. otherwise nothings will there )

- Then you can Assign Name & Password for FTP
- Assign Name For Eg (Test) and then Generate password by click on generate button (next to FTP PASSWORD)
- and then put the same name which you have enter in User Name Eg Test (This will create a folder and name it Test )
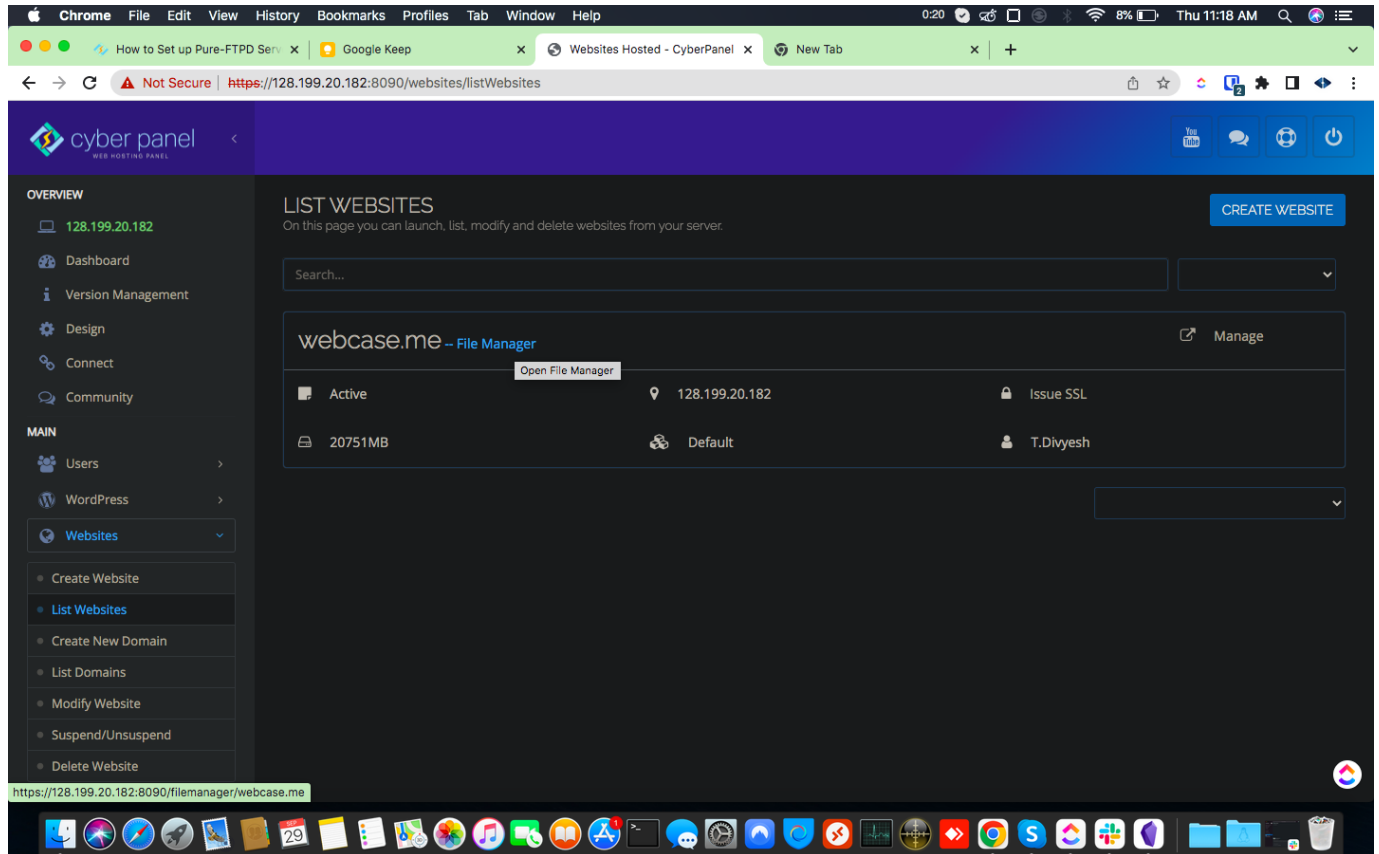

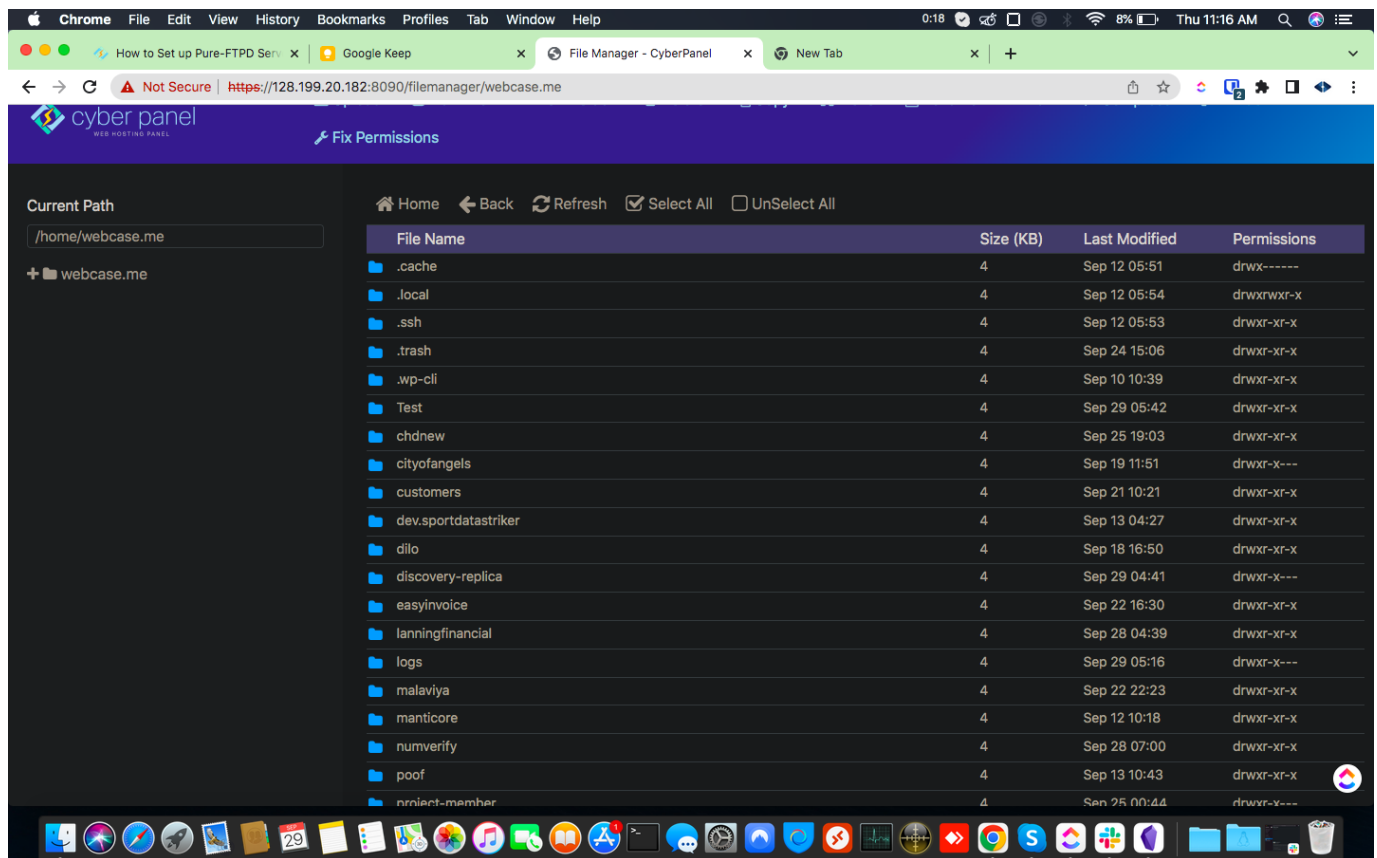

and click on Create FTP

done. FTP is now create and now check Test folder is create in website or not.

now Go to Website section and open list websites and click on file manager

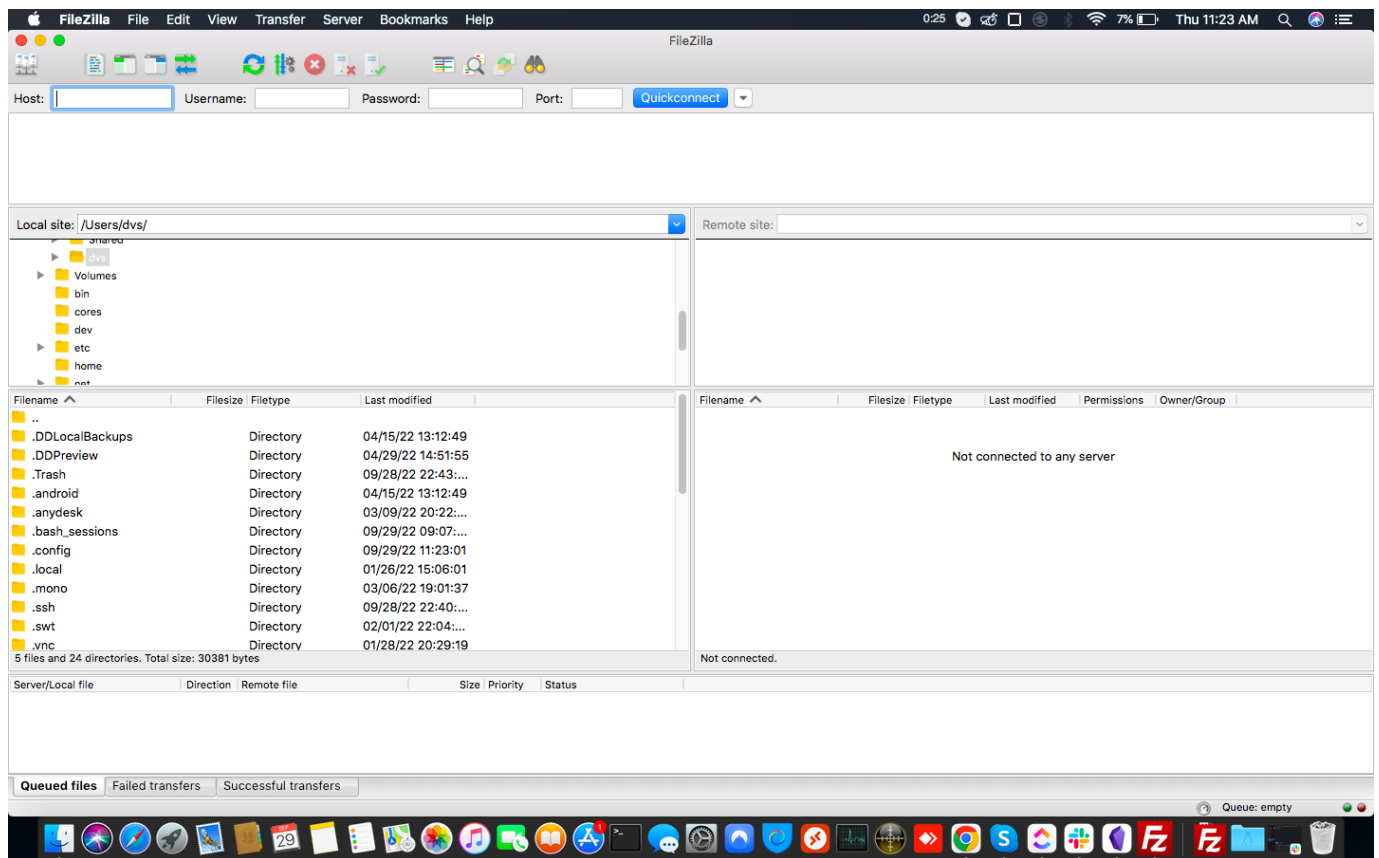

and over here you can see the folder whick we have name (Test)

and now can Do FTP by using FileZIlla.

Downloads FileZilla if you dont have. and if you have then open it.

Now all enter Details

Hostname: (add IP of cyberpanel )
username: (Username)
password: ( Password)
port: (21)

and then click on quickconnect

now you cant upload and file into your site.
